sales@tripowertrading.com

1-877-239-2491

Applications – Caterpillar G3400 and G3500 shielded applications.

Our Process:

1. Used O2 units are visually inspected for damage. All connectors are inspected for possible broken housings. If the unit passes the visual inspection the next steps are performed.
2. Unit is externally cleaned to remove any accumulated dirt or grease.
3. Once cleaned, the unit is rebuilt with an original equipment O2 sensor. This is the exact NTK part number that Caterpillar® offers in their new units. The sensor wire loom is shielded in either new or re-used heavy duty braided sleeving.
4. The units are then individually packaged.

*Why buy new when we
can rebuild your old cores for
a fraction of the price?*
