- Includes all gaskets required for cylinder head change, along with the Fire Ring which is 100% O.E.M. equivalent.
- The gasket materials used in this kit are of the same chemistry as O.E.M gaskets.
- This kit includes all subsets which are packaged individually for ease of ordering and installation (See pictures).
- This gasket set has over 25 years of proven run time performance.
- Gasket set is evaluated every 6 months to ensure the offerings are up to current engineering requirements.
- Within this set, there is one standard nitrile o-ring while all other o-rings are FKM Viton.
- One o-ring has a PTFE (Polytetrafluoroethylene) coating so no moisture attaches.
- The exhaust manifold in this kit is an multi layered embossed stainless metal clad with vermiculite filler (1800 degree) This provides a much higher degree of conformability than the OEM (1200 degree).
- The fire ring is 1018 carbon steel with a alloy mesh that is fusion welded into the beveled area.
- Lastly, the engineer who designed this gasket set was a lead engineer for Parker Aerospace, he was in charge of determining/analyzing all of the chemical formulas.

Genuine Caterpillar®  
O.E.M. Fire Ring
